### [BOLLARDS](#)

**BOLLARDS** Safety bollards are an ideal way to protect equipment, loading dock doors, electrical panels and in other areas where guardrail cannot be mounted.

Constructed from 5.5" diameter schedule 40 pipe, these bollards are welded to a 10"x10"x5/8" base plate. When anchored to the floor with 5/8"x5" anchor bolts, these safety bollards are virtually indestructible.

Welded top cap is rounded off for a smooth finish and appearance. Entire bollard is painted yellow for high visibility. Standard heights are 24", 36", 42" and 48".

**24"H SAFETY BOLLARD**
